Urban Lighting Innovations

HARD-RESET just 2 clicks away!

- BBC-PowerNode is a groundbreaking new development that makes the operation of gateways, sensors and other Smart City technologies much cheaper and dramatically increases the availability of such systems!
- BBC-PowerNode enables operators of Smart City infrastructures to HARD-RESET their technologies completely remotely - even if they are not accessible at all!
- BBC-PowerNode monitors the power parameters on the power-supply side, which significantly reduces the search for the cause of faults (e.g. power failure) from a distance.
- All of this works conveniently via the Health Center, an easy-to-use web interface!

HARD-RESET on cameras, displays, LoRa gateways, WiFi hotspots, sensors, measuring stations and much more are no longer a visit on site with the BBC-PowerNode, but just 2 clicks away! After its tried and tested in many of our own projects, BBC-PowerNode is celebrating its market debut at this year's Smart City Expo World Congress.
